

Guides Product

Ancient ARC Raiders

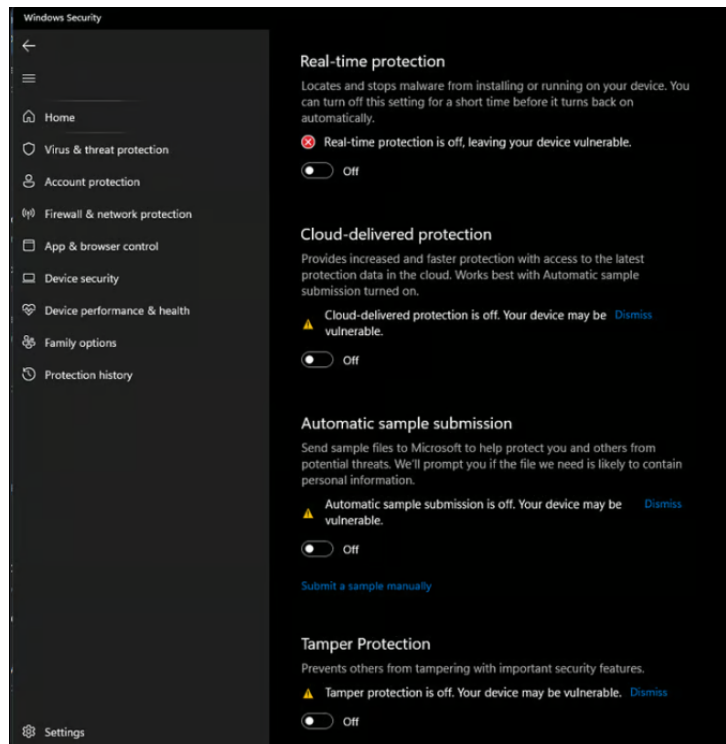

How to set up our Ancient ARC Raiders cheat and fix the most common errors. Full guide

Make sure the game is fully closed before you begin.

Anti-Virus Setup

 1 Disable Virus & Threat Protection.

Windows Security → Virus & Threat Protection → turn off all four settings

2 Download DControl, **Downloaded DControl run dControl and click Disable Windows Defender.**

3 **Windows Security → Firewall → turn off all three options.**

4 Disable Smart App Control.
App & Browser Control → Smart
App Control → Off.

Smart App Control

Enhanced protection from untrusted apps.

☐ On

If Smart App Control spots a malicious or untrusted app it will block it to help protect your device.

☐ Evaluation

While Smart App Control is in Evaluation mode, it will learn if it can help protect you without getting in your way too much. If so, it will automatically be turned on. Otherwise, it will automatically be turned off.

☒ Off

If Smart App Control is off it can't be turned on without reinstalling Windows.

[Learn more about why Smart App Control is off](#)

5 Disable Exploit Protection.
App & Browser Control → Exploit protection settings → turn each option off.

Exploit protection

See the Exploit protection settings for your system and programs. You can customize the settings you want.

System settings Program settings

Control flow guard (CFG)

Ensures control flow integrity for indirect calls.

Off by default

Data Execution Prevention (DEP)

Prevents code from being run from data-only memory pages.

Off by default

Force randomization for images (Mandatory ASLR)

Force relocation of images not compiled with /DYNAMICBASE

Off by default

Randomize memory allocations (Bottom-up ASLR)

Randomize locations for virtual memory allocations.

Off by default

High-entropy ASLR

Increase variability when using Randomize memory allocations (Bottom-up ASLR).

Off by default

To use High-entropy ASLR, turn on Randomize memory allocations

Validate exception chains (SEHOP)

Ensures the integrity of an exception chain during dispatch.

Off by default

Validate heap integrity

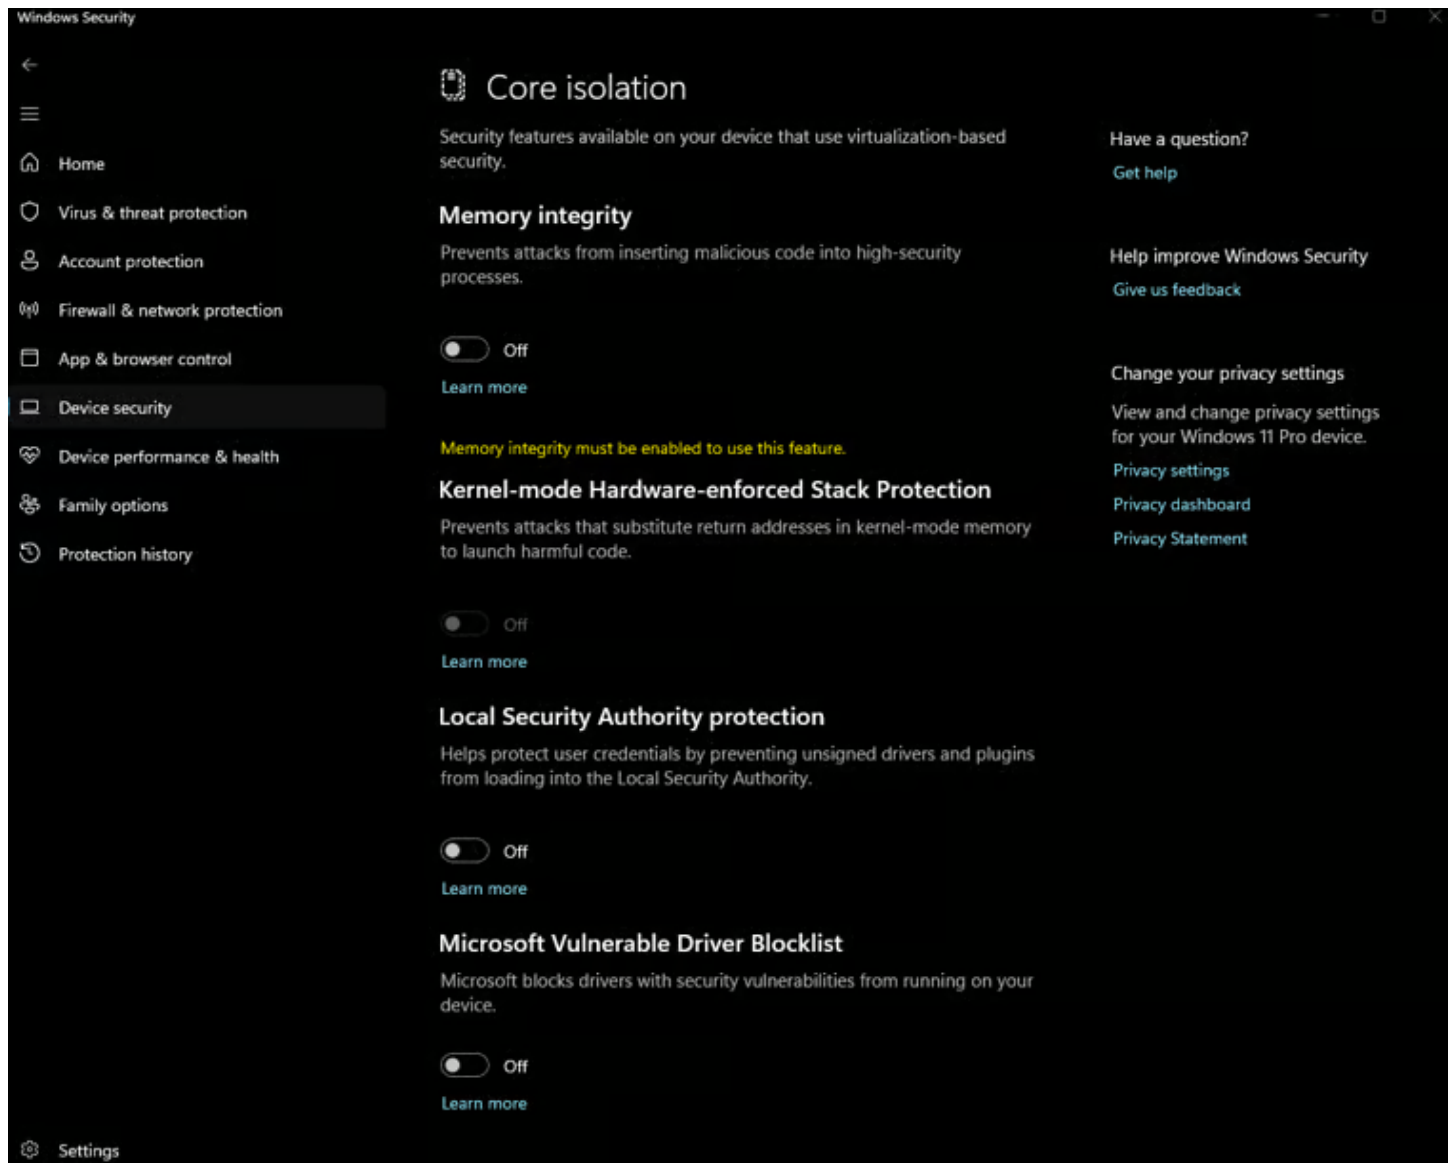

Terminates a process when heap corruption is detected.

Off by default

[Export settings](#)

6 Disable Core Isolation.

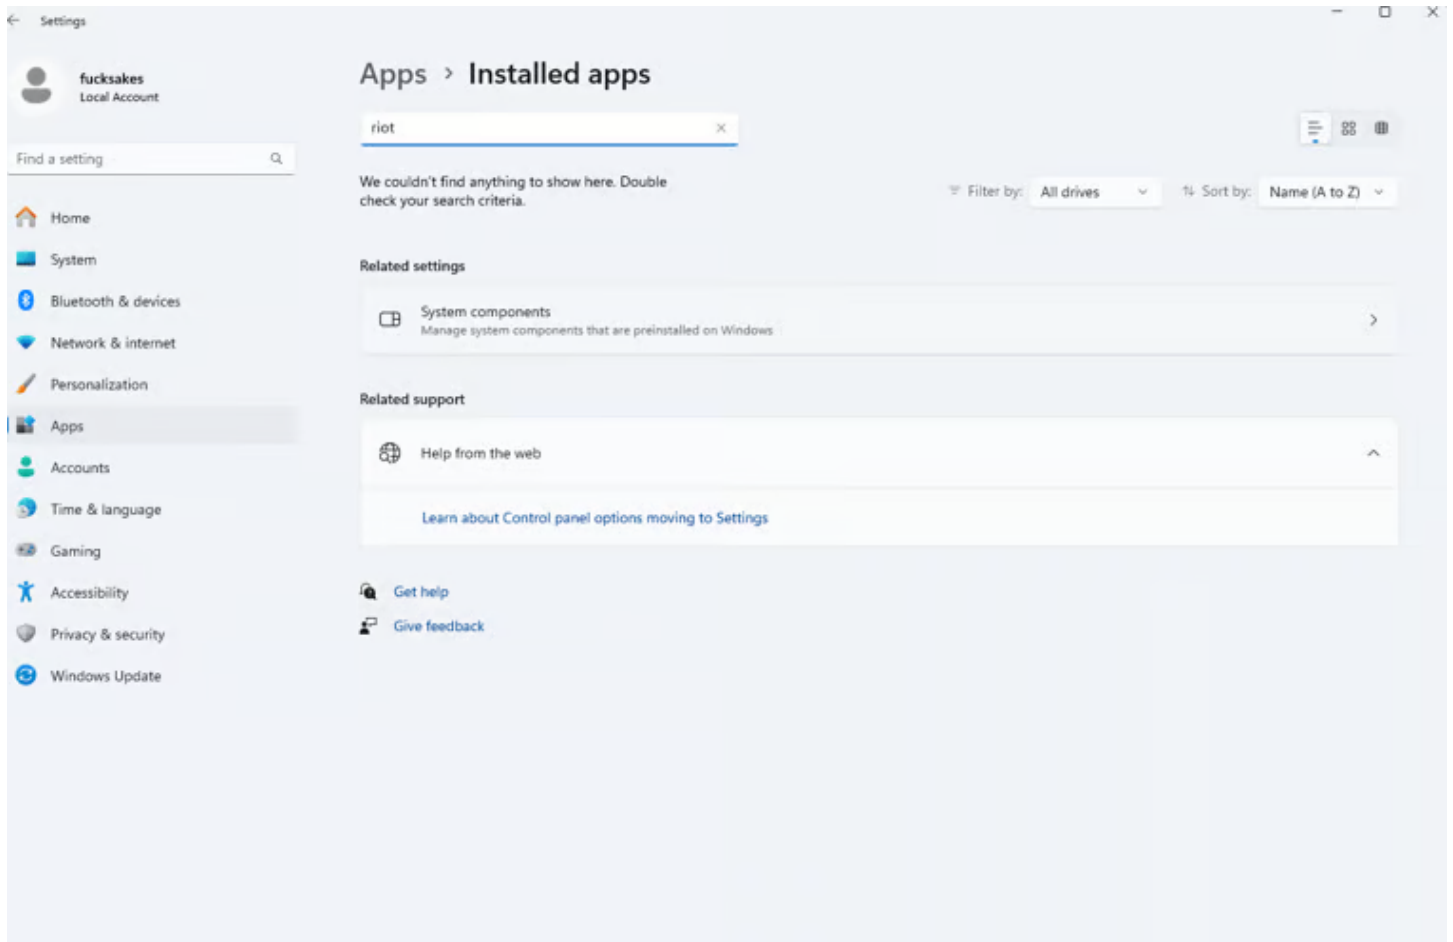

Device Security → Core isolation details → disable all settings.

7 Uninstall 3rd party game anti-cheats that run 24/7

(Riot Client, Vanguard, FACEIT)

and any third-party antivirus, via Add or Remove Programs.

8 Restart your PC.

Enable CPU Virtualization

This product requires CPU Virtualization to be Enabled in your PC's Bios as it utilizes a Hypervisor, if you have it disabled you will be prompted to enable it by the loader. You

can google this step online, we do not provide 1 on 1 support for this as it varies per motherboard and system.

1 Run the loader.

During first launch the file may download an update and close (reopen it again), while also randomizing its file name, so place it in a folder in your downloads to ensure you don't lose track of it.

2 Enter your key & click login.

Your key can be found under deliverables within your invoice.

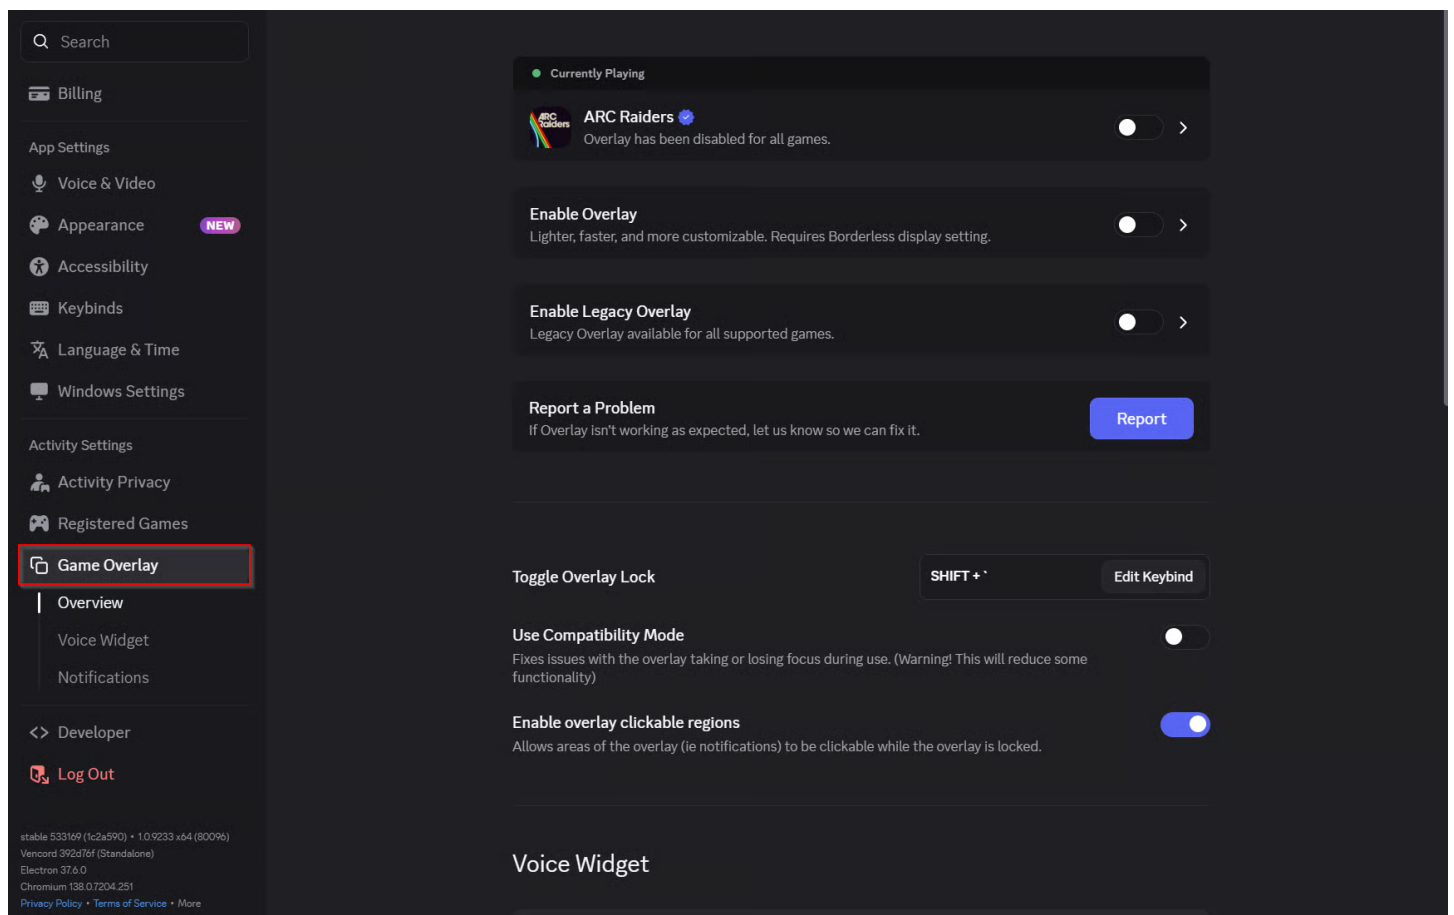

3 Ensure one of the valid overlays for the product is running.

This product requires one of the following overlays below to be running, follow one of the guides below to ensure it is setup properly.

1 Discord Overlay setup

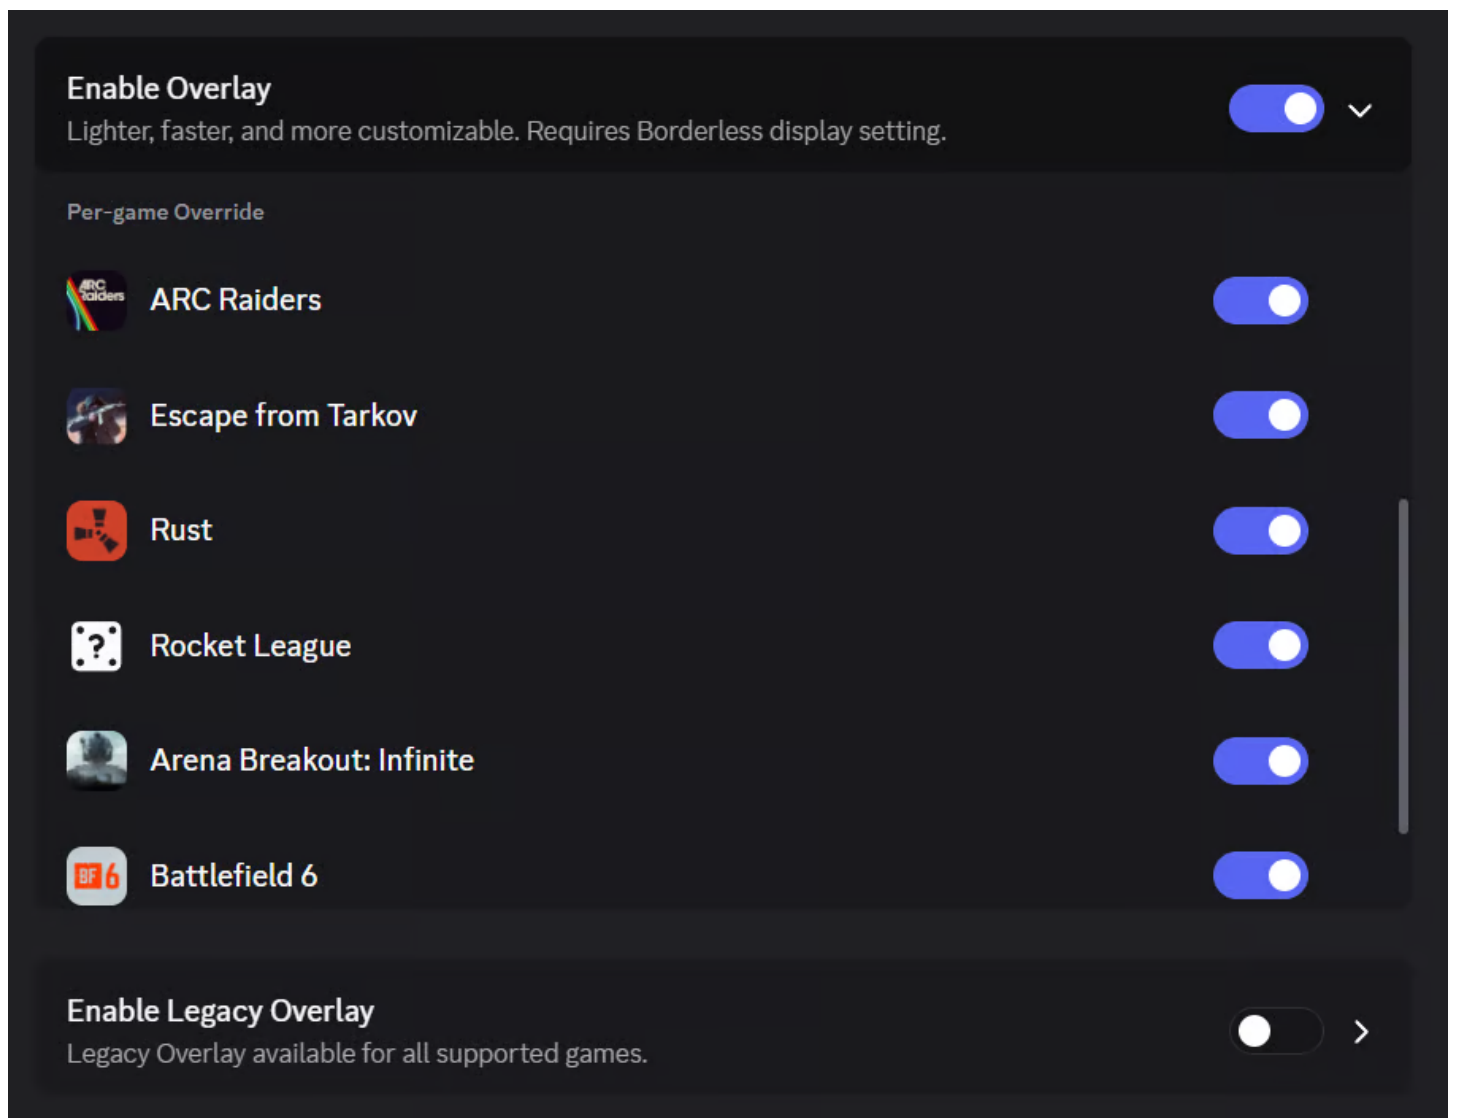

Find the Discord overlay settings.

Discord Settings → Game Overlay.

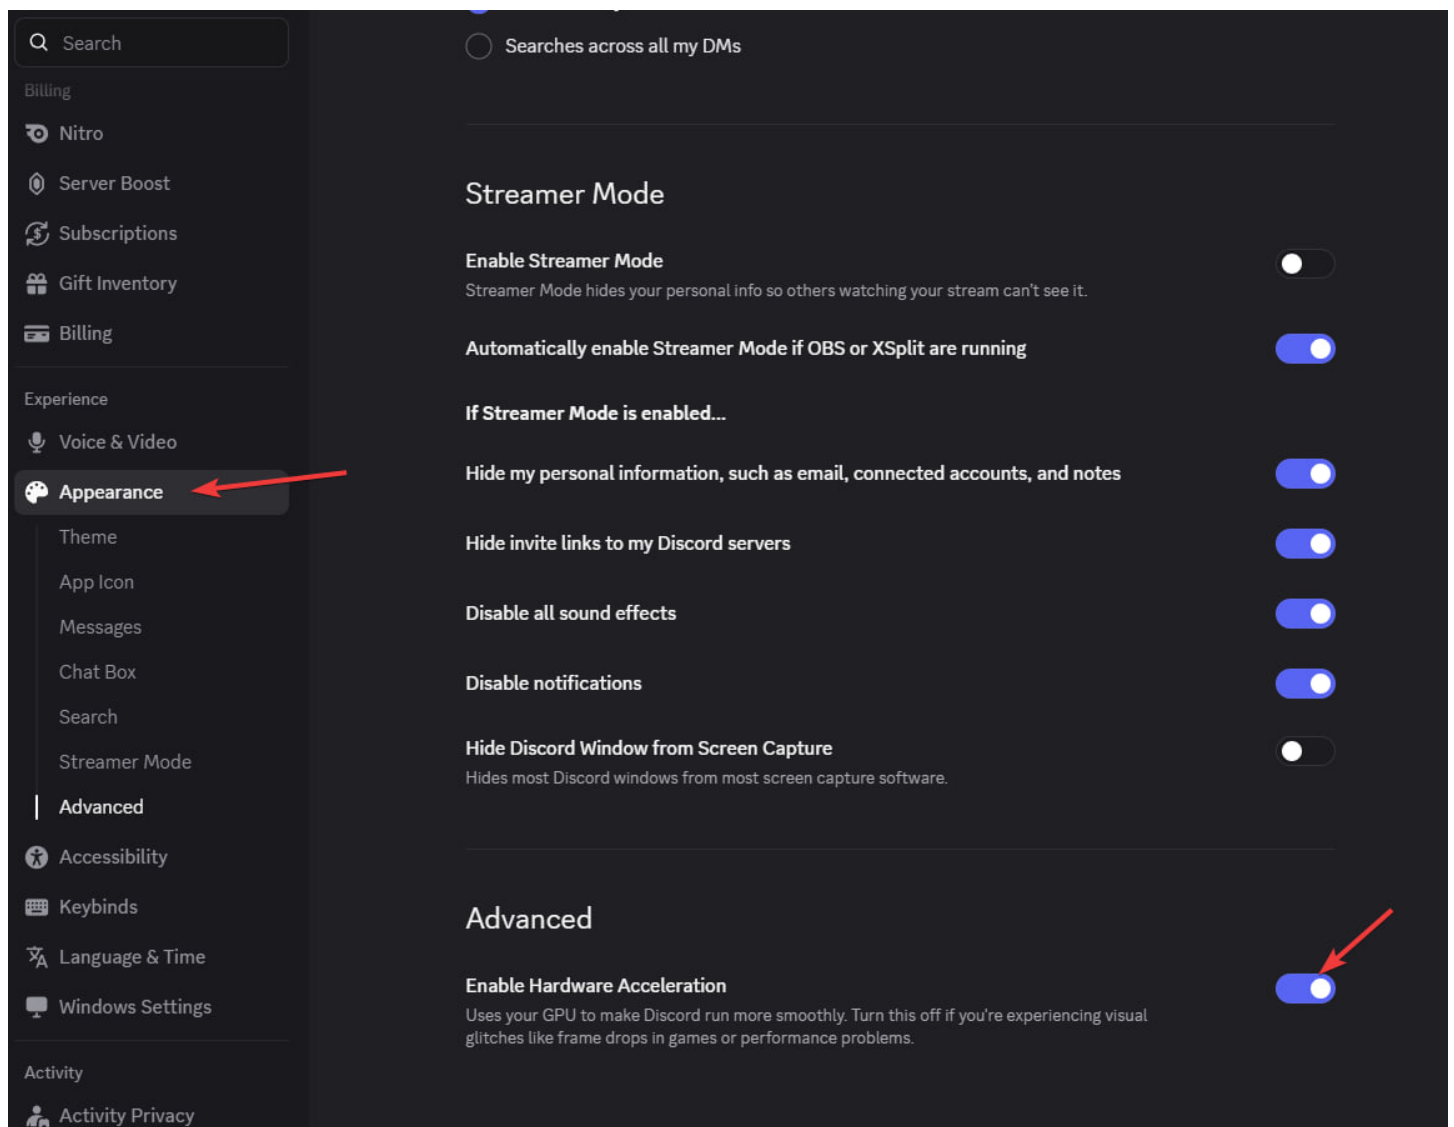

2 Enable the overlay

and turn it on specifically for ARC Raiders. If the game isn't running it appears under *Per-game Override*. Keep Legacy Overlay turned off.

3 Enable Hardware Acceleration.

Enable the setting “Enable hardware acceleration”.

4 Initialize the overlay.

Keep Discord running, then press Load in the loader.

Display mode must be Borderless

Set the game display mode to Borderless Fullscreen, not Fullscreen Exclusive. Exclusive fullscreen will crash the menu.

5 Load the cheat.

Press Load & launch the game once the loader closes after it finishes downloading data.

During initial setup you may receive a “You're about to be signed out” message, this is expected.

6 Wait for the cheat to initialize.

Depending on the product, menu initialization can happen within seconds or after a minute, be sure to wait around 2 minutes after loading your game.

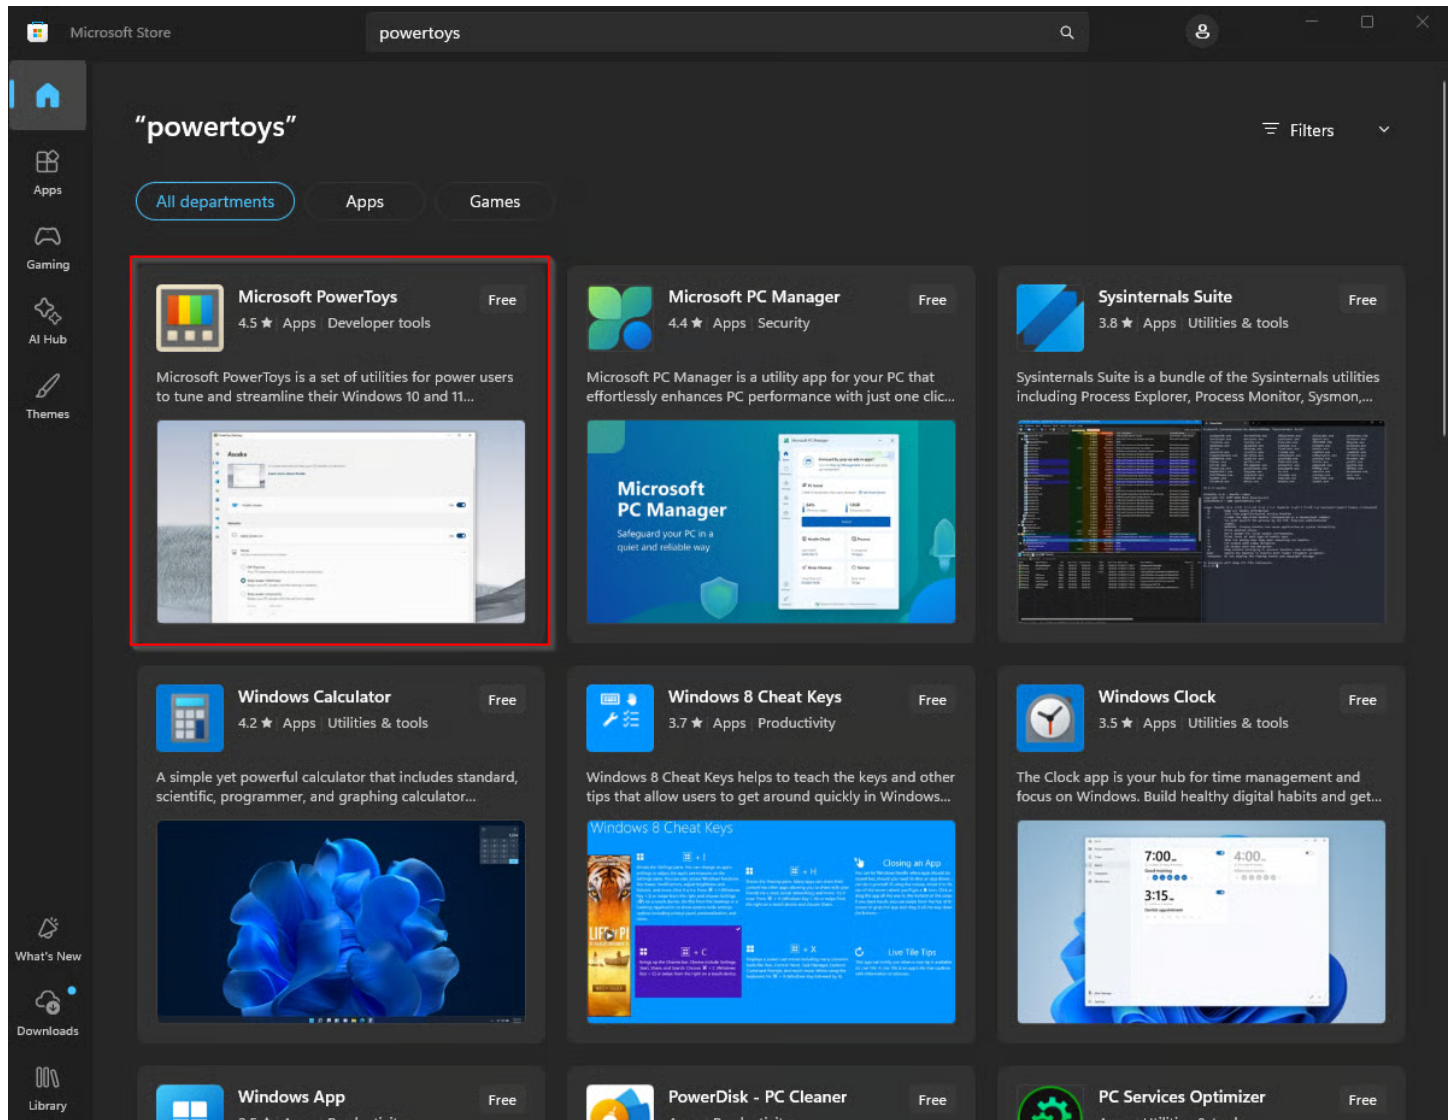

7 Toggling the cheat menu.

The menu toggle key for the product is Insert. If you do not have this key on your keyboard, you can follow the guide below to remap a key to Insert.

Remapping the Insert key

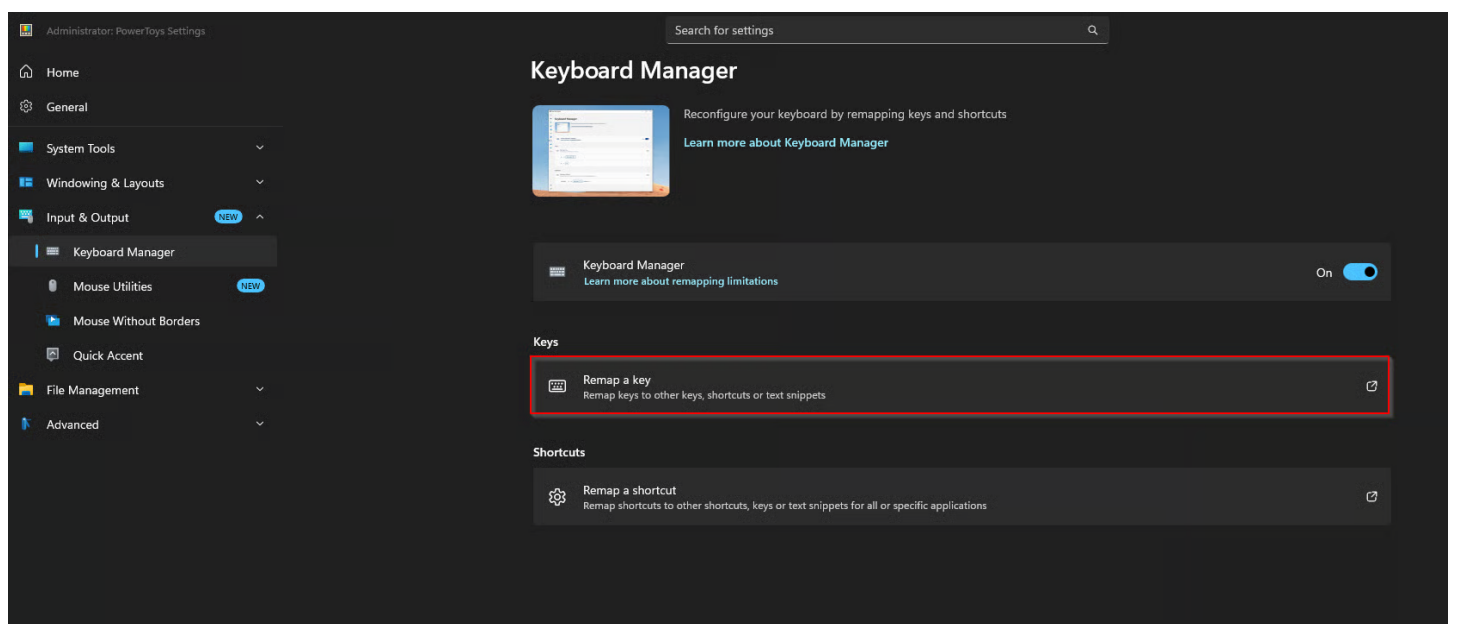

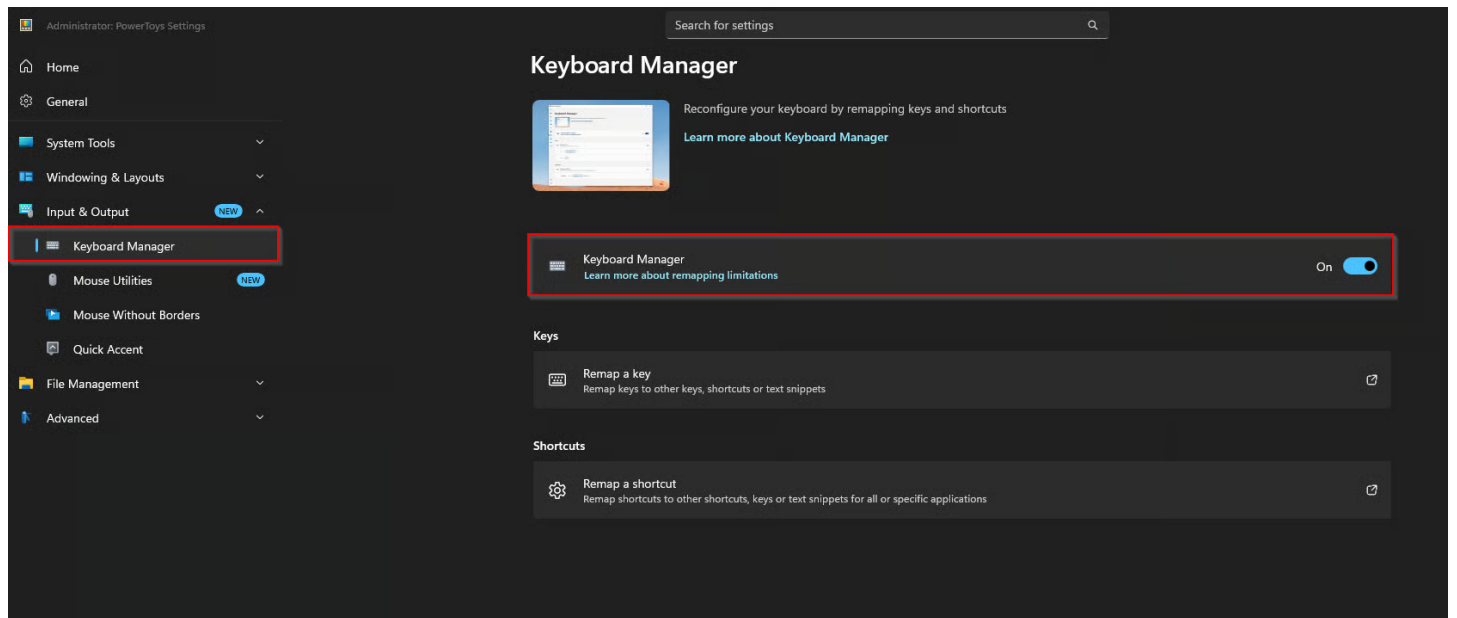

1 Install the PowerToys app.

Open the Microsoft Store, search PowerToys, install and launch it

2 Open & configure the key remapping.

Go to Input & Output → Keyboard Manager and enable it. Click Remap a key → Add key remapping. Click Select, press the key you want to use, confirm it under “Key selected” and click OK. Change To send to Insert, press OK, then Continue anyway if prompted.

Remap keys

OK

Cancel

Select the key you want to change ("Select") and then configure the key, shortcut or text you want it to send ("To send").

Example of a remapping: Select A and send "Ctrl+C", "A" would be your "Select" and "Ctrl+C" would be your "To send" command.

Select:

To send:

+ Add key remapping

Remap keys

OK

Cancel

Select the key you want to change ("Select") and then configure the key, shortcut or text you want it to send ("To send").

Example of a remapping: Select A and send "Ctrl+C", "A" would be your "Select" and "Ctrl+C" would be your "To send" command.

Select:

To send:

Select

Send Key/Shortcu

Select

+ Add key remapping

Select a key on selected keyboard

Key selected:

Hold Esc to discard

Hold Enter to continue

OK

Cancel

Remap keys

OK

Cancel

Select the key you want to change ("Select") and then configure the key, shortcut or text you want it to send ("To send").

Example of a remapping: Select A and send "Ctrl+C", "A" would be your "Select" and "Ctrl+C" would be your "To send" command.

Select:

To send:

Select

Send Key/Shortcu

Select

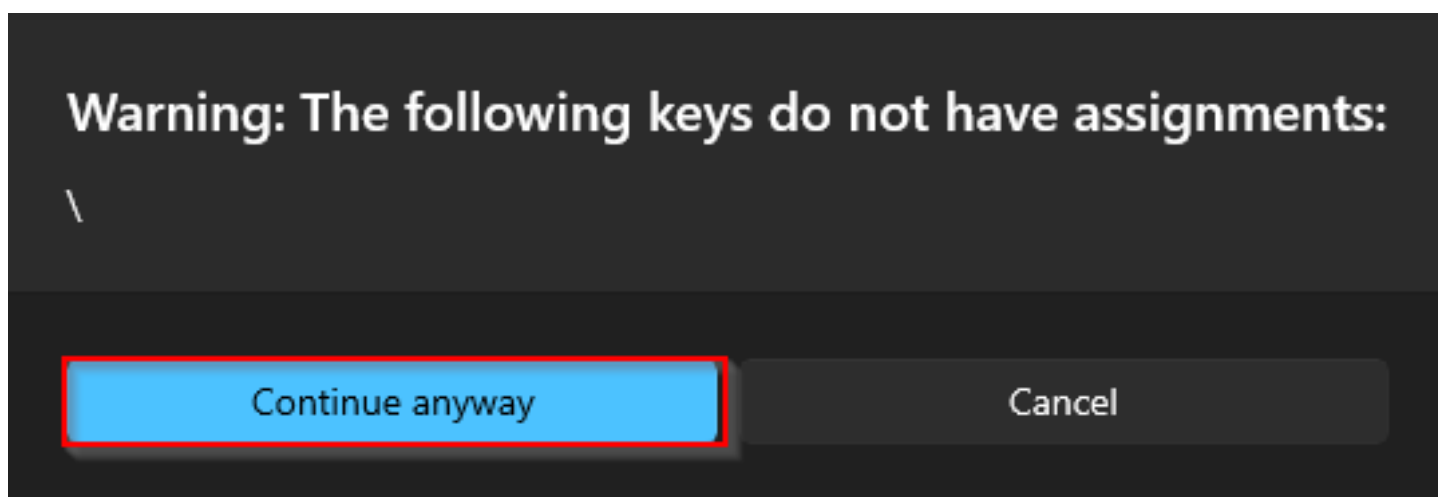

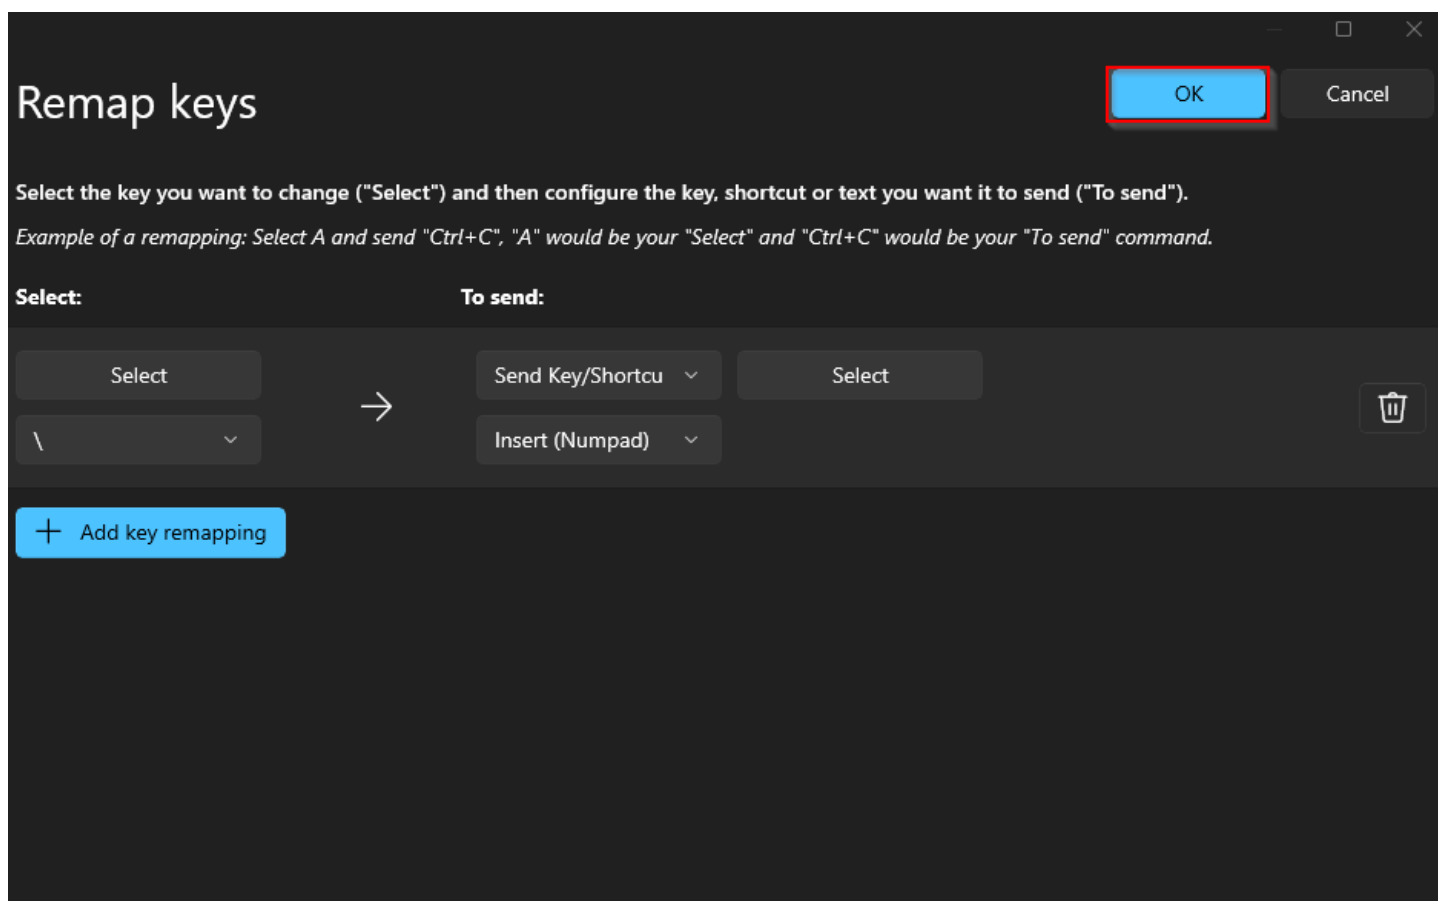

\

Insert (Numpad)

+ Add key remapping

3 Finished!

Your remapped key now registers as Insert and toggles the menu.

Avoid bans

Most bans happen because of aimbot use. Whenever possible, use ESP-only, it avoids the mouse/aim tracking that anti-cheats may look for.

Troubleshooting & error fixes

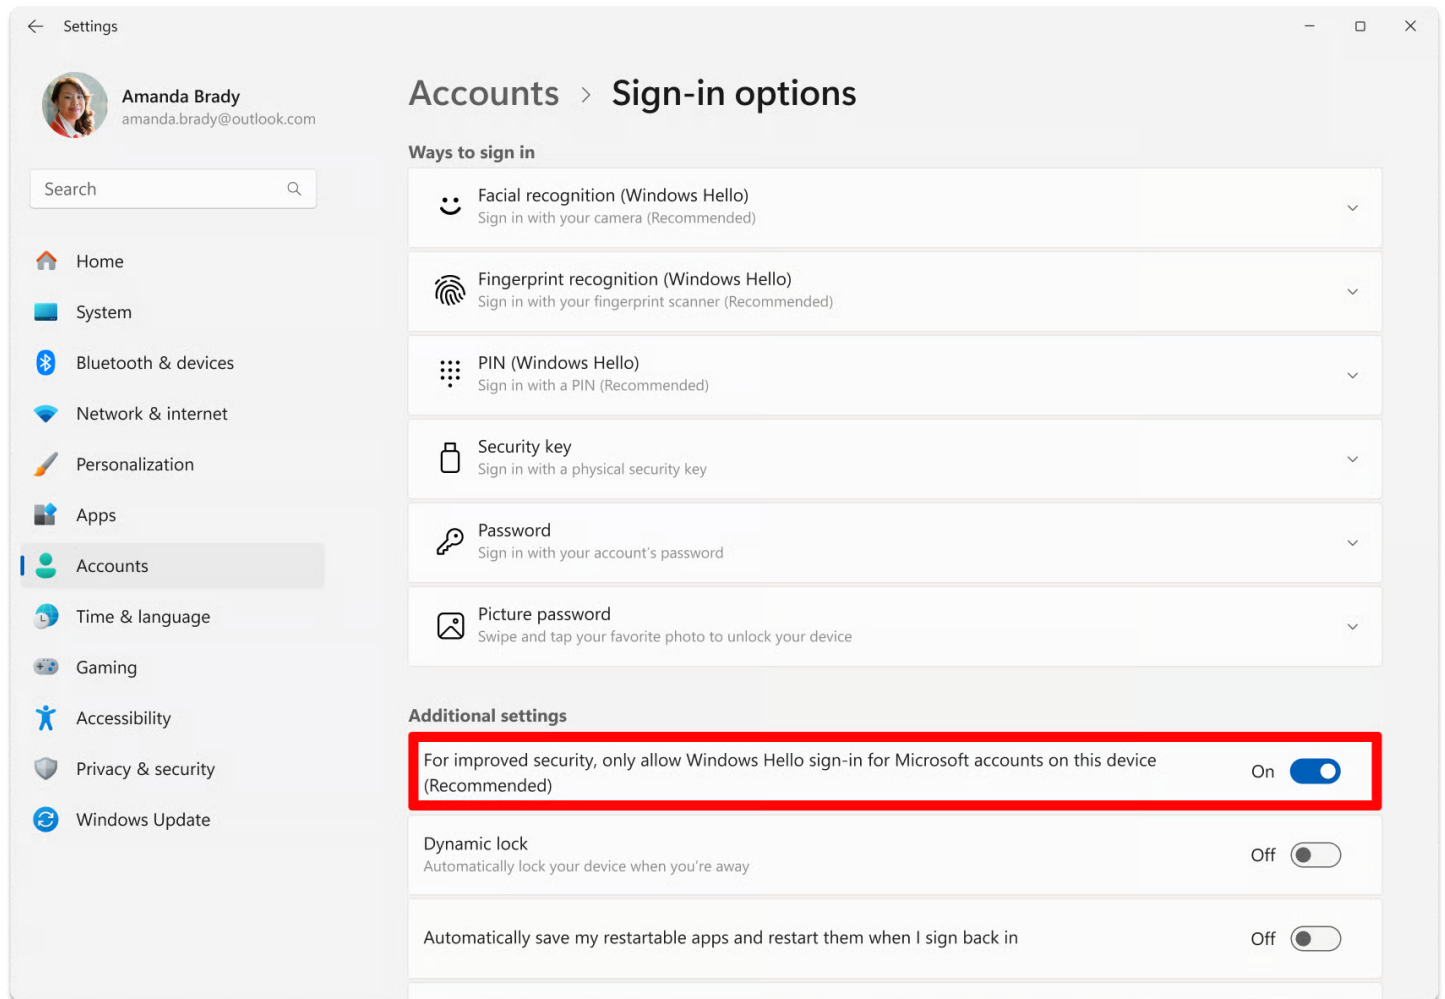

Open the fix that matches your issue. You only need the ones relevant to the error you're seeing.

FIX

Please make sure PIN is not set in Windows sign-in options and manually disable Hyper-V

1 Open windows search and type “Sign-in Options”, then open it in settings.

2 Find the setting below and make sure it is disabled.

3 Click on PIN (Windows Hello), and ensure it is NOT SET, if it is, then remove your PIN and make sure a password is set.

4 Download & run [this file](#) , it will automatically restart your PC after 10 seconds.

FIX

Any Disable/Failed To Disable Hyper-V Errors

Download & run [this file](#), it will automatically restart your PC after 10 seconds.

FIX

Failed to allocate/map memory

1 Disable everything in Task Manager -> Startup Apps and then try again after PC restart.

2 Make sure that loader located on PC and not on cloud space (e.g OneDrive, Mega.nz).

3 Download [this file](#) and disable everything that related to Microsoft/Windows/CurrentVersion/Run. But DO NOT touch anything else.

FIX

Run DISM Repair Commands/Failed To Repair Files/Restore System Files

Open Command Prompt as Administrator. Enter each line below separately into the command prompt waiting till each one finishes then doing the next one:

DISM /Online /Cleanup-Image /CheckHealth
DISM /Online /Cleanup-Image /ScanHealth
DISM /Online /Cleanup-Image /RestoreHealth
sfc /scannow
Restart your PC.

FIX

Failed to load crt lib/Install Visual Runtimes

- 1** Download [Download Visual C++ Redistributable Runtimes All-in-One](#) below.
- 2** Extract the folder.
- 3** Run the install.bat in the extracted folder and wait until it installs everything.
- 4** Restart PC.

FIX

Install DirectX

- 1** Download The DirectX Setup below.
- 2** Run the installer and wait until it is finished.
- 3** Restart PC.
